

Norovirus

Winter vomiting and diarrhoea bug

Norovirus can affect everyone; it can close down the business and is almost certainly circulating in the community right now.

You can help to prevent it spreading

Wash hands frequently with soap and warm water
Hand gel will NOT kill the virus!

Stay at home if you have diarrhoea and/or vomiting until 48 hours after symptoms have ceased.

Norovirus can seriously endanger those who are already ill (especially the young and elderly). If you (or someone you have been in contact with) have had diarrhoea and/or vomiting do not return to work until at least 48 hours after symptoms stop.
